

More than Filling.

02 | 03 Partnership

We are there for you. And for your success.

Vetter: over 25 years of experience in producing high-quality aseptically prefilled injection systems.

Vetter is an independent international specialist in the production of aseptically prefilled syringe systems, cartridges and vials.

Vetter provides support for its clients from the initial phases of development and regulatory approval process through to the successful product launch and commercial manufacturing.

Vetter is renowned for its quality, innovation and loyalty as a strategic partner for its pharmaceutical and biotech clients.

**Your active substance and our skills –
the ideal formula for global market success.**

Your active pharmaceutical substance is only one factor in the market success of your drug. The way it is presented and administered is crucial as well.

Patient-friendly, prefilled injection systems help to maximize market opportunities for your product, particularly if you choose one of Vetter's innovative systems.

Vetter is a leading world expert in the aseptic filling of liquid and lyophilized drugs.

Beginning at the development stage, we assist our customers by designing the form of administration that best matches your new drug. We also validate the entire production process. By harmonizing the application system with your active substance, Vetter is able to significantly accelerate the time-to-market for your new pharmaceutical product and to maximize your market impact.

We also develop innovative application systems including the related production processes. Safety, patient care and convenience are always our primary concern. With over 25 years of experience in the production of aseptically prefilled injection systems, we at Vetter have an extensive number of successful international customer product launches to our credit. We also have over 20 years of experience in working with products and processes approved by the FDA, the EMA and other authorities.

As an independent company, which does not manufacture its own pharmaceutical products, Vetter is completely dedicated to its partners. You can count on our absolute loyalty, free of any conflict of interest.

We offer what you need. And more than you expect.

Vetter Development Service

works with your product from its clinical development through its market launch. We also provide these services for products already in the market requiring a new registration in the course of lifecycle management.

Vetter Commercial Manufacturing

Relying on our experience and expertise in the processing of aseptically prefilled injection systems, we leverage our extensive knowledge of international requirements to produce your product in accordance with the most demanding quality standards.

Vetter Solutions

Our innovative patented application systems will help your product to attain a decisive edge in the market.

**Get in the fast lane
with a strong partner.**

Vetter provides support for its pharmaceutical and biotech clients from the initial phases of development and regulatory approval process through to the successful product launch and market supply worldwide.

We focus on the success of your product. From the very beginning.

Vetter – a strategic partner in the early stages of product development.

One of the greatest challenges in the pharmaceutical industry today is to closely match a product's active substance with its mode of administration.

The need to ensure both efficiency in production and the careful handling of sensitive substances imposes rigorous demands on the design of application systems as well as production methods.

The tailoring of the injection system to your active substance accelerates the time-to-market and maximizes your market impact.

As specialists in the handling of highly sensitive active substances, we can make sure that your liquid or lyophilized active substance will be produced quickly, efficiently and carefully. Prior to clinical production, we support the selection of the most suitable injection system to ensure the production feasibility of your product. We then tailor the most suitable injection system to its specifications. Once the clinical stage is complete, we focus on finding the best methods for the commercial production of your product. At the same time we prepare and draft the documents necessary to obtain your international regulatory approvals.

To ensure the ease and efficiency of the entire process, the experts from Vetter should be consulted at the earliest possible stage of drug development. This also goes for products already in the market requiring a new registration in the course of lifecycle management. Contacting us at the clinical development phase of your new drug will save you time and money – and will help secure you a decisive edge in the market.

**Achieving more through partnership:
Vetter Development Service.**

We produce quality. Day by day.

Vetter produces sterile liquid and lyophilized drugs in compliance with international requirements and the most demanding standards in quality.

Concentrate and focus your resources. Leave the details and potential risks of production to us, your specialist and loyal partner. **Vetter Commercial Manufacturing** can handle everything for you – from the initial stages of sterile filling through the custom-packing of your final product.

Our experience working for your success: Vetter Commercial Manufacturing.

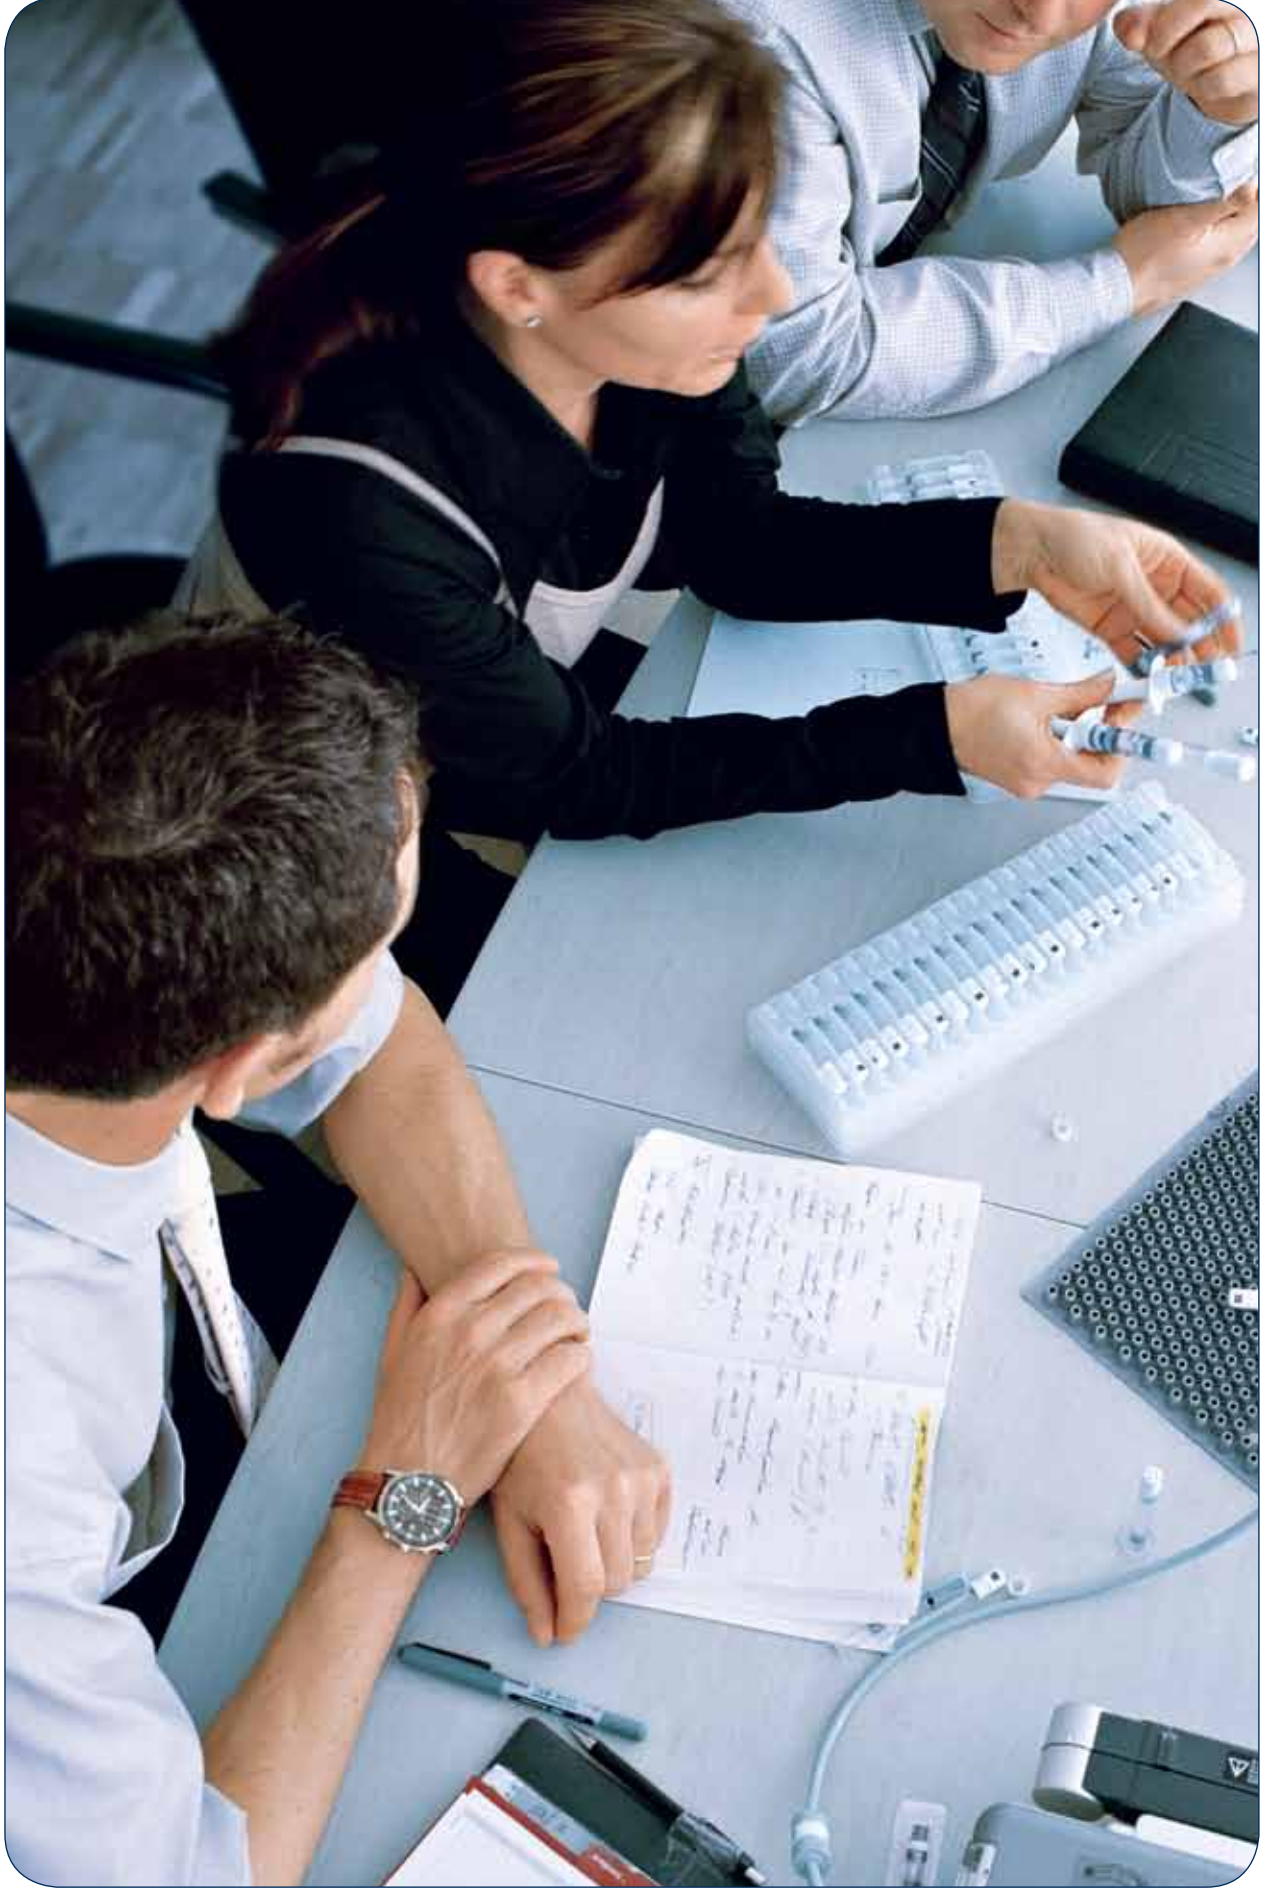

For over 25 years we have produced sterile products for our customers.

Our focus is on aseptically prefilled injection systems. We utilize and are experienced in a large array of standard syringe systems, cartridges, vials and our own patented application systems. Liquid parenteral drugs and lyophilized drugs are manufactured in our state-of-the-art manufacturing sites.

There, Vetter successfully applies a full range of cutting-edge technology in the sterile production of your product. We utilize Restricted Access Barrier Systems (RABS) to ensure safe aseptic processes. Our sterile products and processes have been designed and tested in accordance with international cGMP standards (i. e., FDA, EMA, etc.). In this way, we are able to assure the production (form, fill and finish) of modern biopharmaceutical drugs in line with requirements of international regulatory agencies. Our quality assurance system monitors the products and processes to ensure conformity with the agreed quality specifications and regulatory requirements.

We are always searching for new possibilities. For the benefit of everyone.

With innovative and patient-friendly solutions, Vetter offers its partners a competitive edge in markets throughout the world.

An easy-to-use, patient- and user-friendly mode of application is important, particularly for home-care products. Additional patient- and user-friendliness can give you the decisive market advantage. Our innovative systems not only appeal to patients and carers, but also provide a decisive competitive edge in the marketplace. This creates genuine added value for our partners, our customers.

Patient approval is all-important in today's competitive drug market. Maximize the market opportunities of your product with Vetter's innovative and patient-friendly solutions.

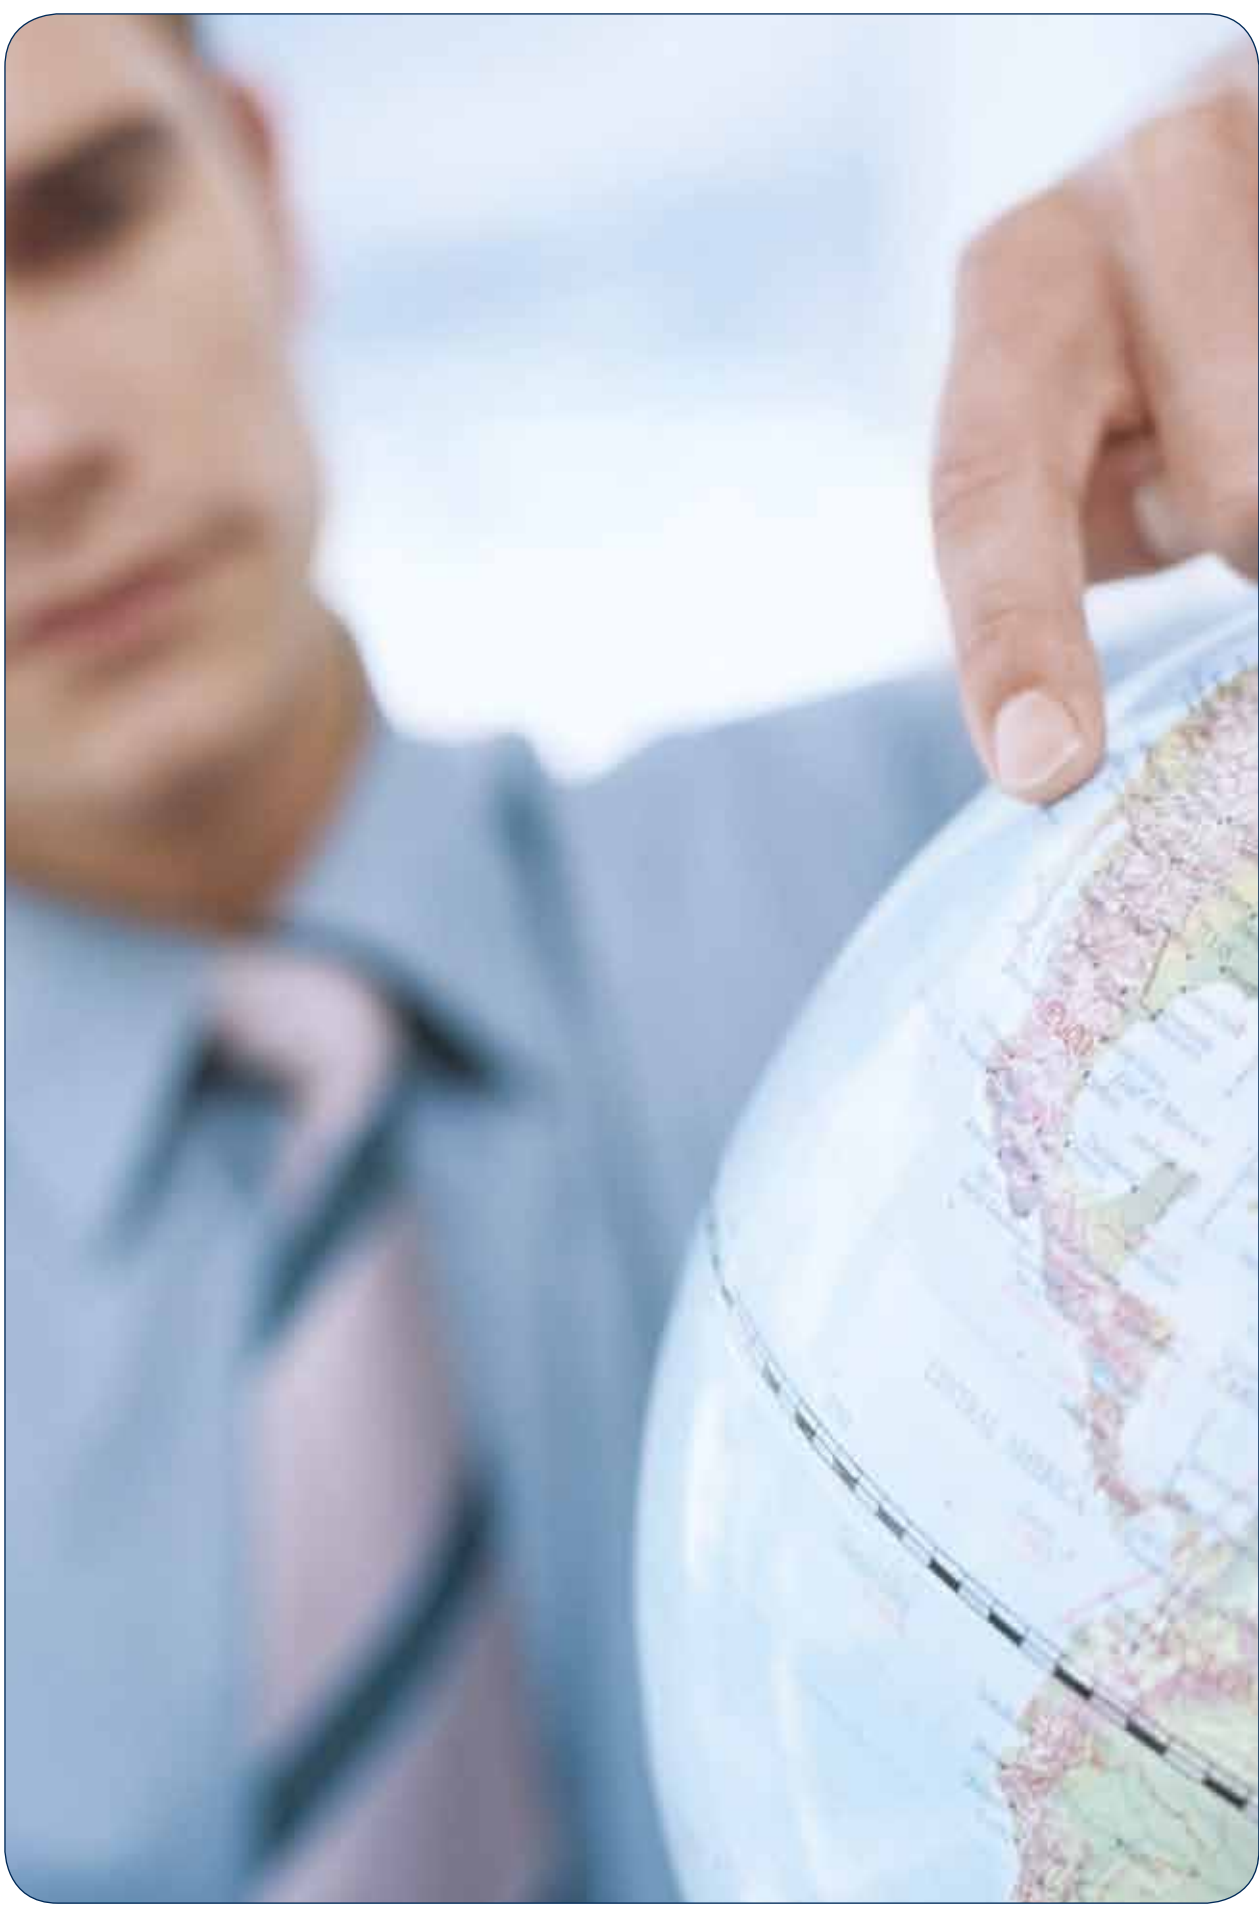

Ahead of our competitors by the length of a syringe: Vetter Solutions.

As a result of their high quality, their efficient production processes and their patient-friendly designs, Vetter prefilled systems excel in the marketplace. This is particularly true of our own patented innovations. Here are just a few examples.

The Vetter Lyo-Ject® dual-chamber ready-to-use syringe for example is designed for sensitive drugs which will not degrade in a lyophilized state. The actual active ingredient is lyophilized in one chamber, while the other chamber of the syringe contains a solvent that is mixed with the active substance immediately before application. This all-in-one concept assures a long shelflife as well as easy handling. This also means higher yields of your active product ingredient and precision in dosing.

Other ready-to-use syringes can also be equipped with the V-OVS® seal. This seal maintains the integrity of the product from production until usage.

We take responsibility. Gladly.

The planet Earth is finite. At Vetter we realize that natural resources are the foundations of our economy. And we know that our business has effects on society. That's why Vetter places such high value on sustainability.

At Vetter we regard sustained trading as the combination of an intact environment, corporate success and social responsibility. Not only in our business philosophy, but in our daily work – everyday, in every business area, in every process.

Responsible for man and the environment. At Vetter it's not merely a trend, but a matter of course.

A sustainable development founded on three building blocks: ecology, economics and society. Each individual area is equally valued and devoted equal attention. Our aim is to satisfy partners and patients, to maintain a growth-stimulating business culture and to secure Vetter's sustained economic success.

A potentially more efficient energy and resource application has already taken center stage in process development. Furthermore we are continually working hard to constantly improve all our production processes, for example by further minimizing noise and other emissions.

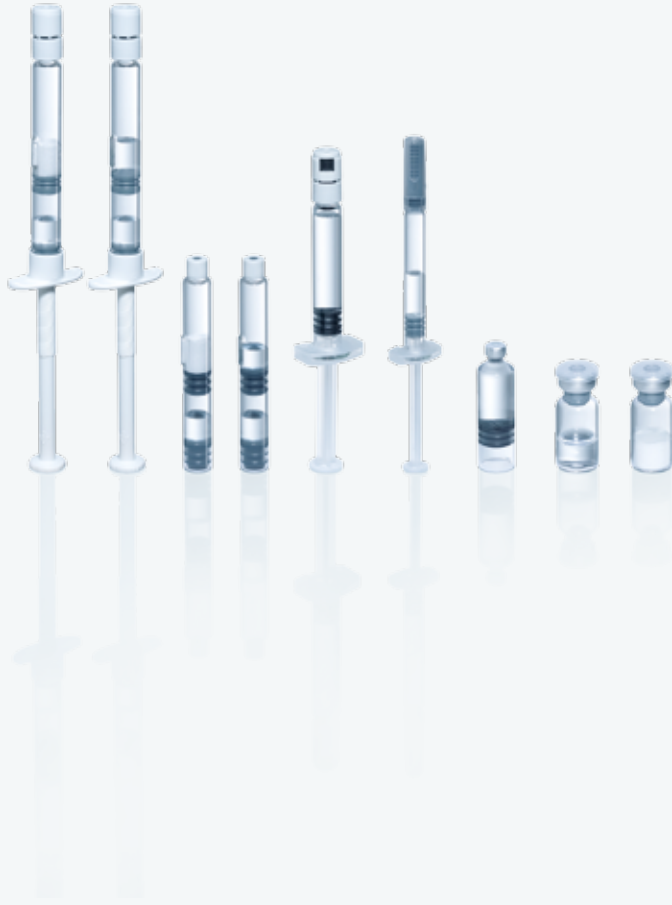

Based on our solid financial foundation we want to further create values, which will benefit both our clients and our employees. This will allow us to further maintain and develop our position as one of the global-leading specialists in aseptically prefilled injection systems.

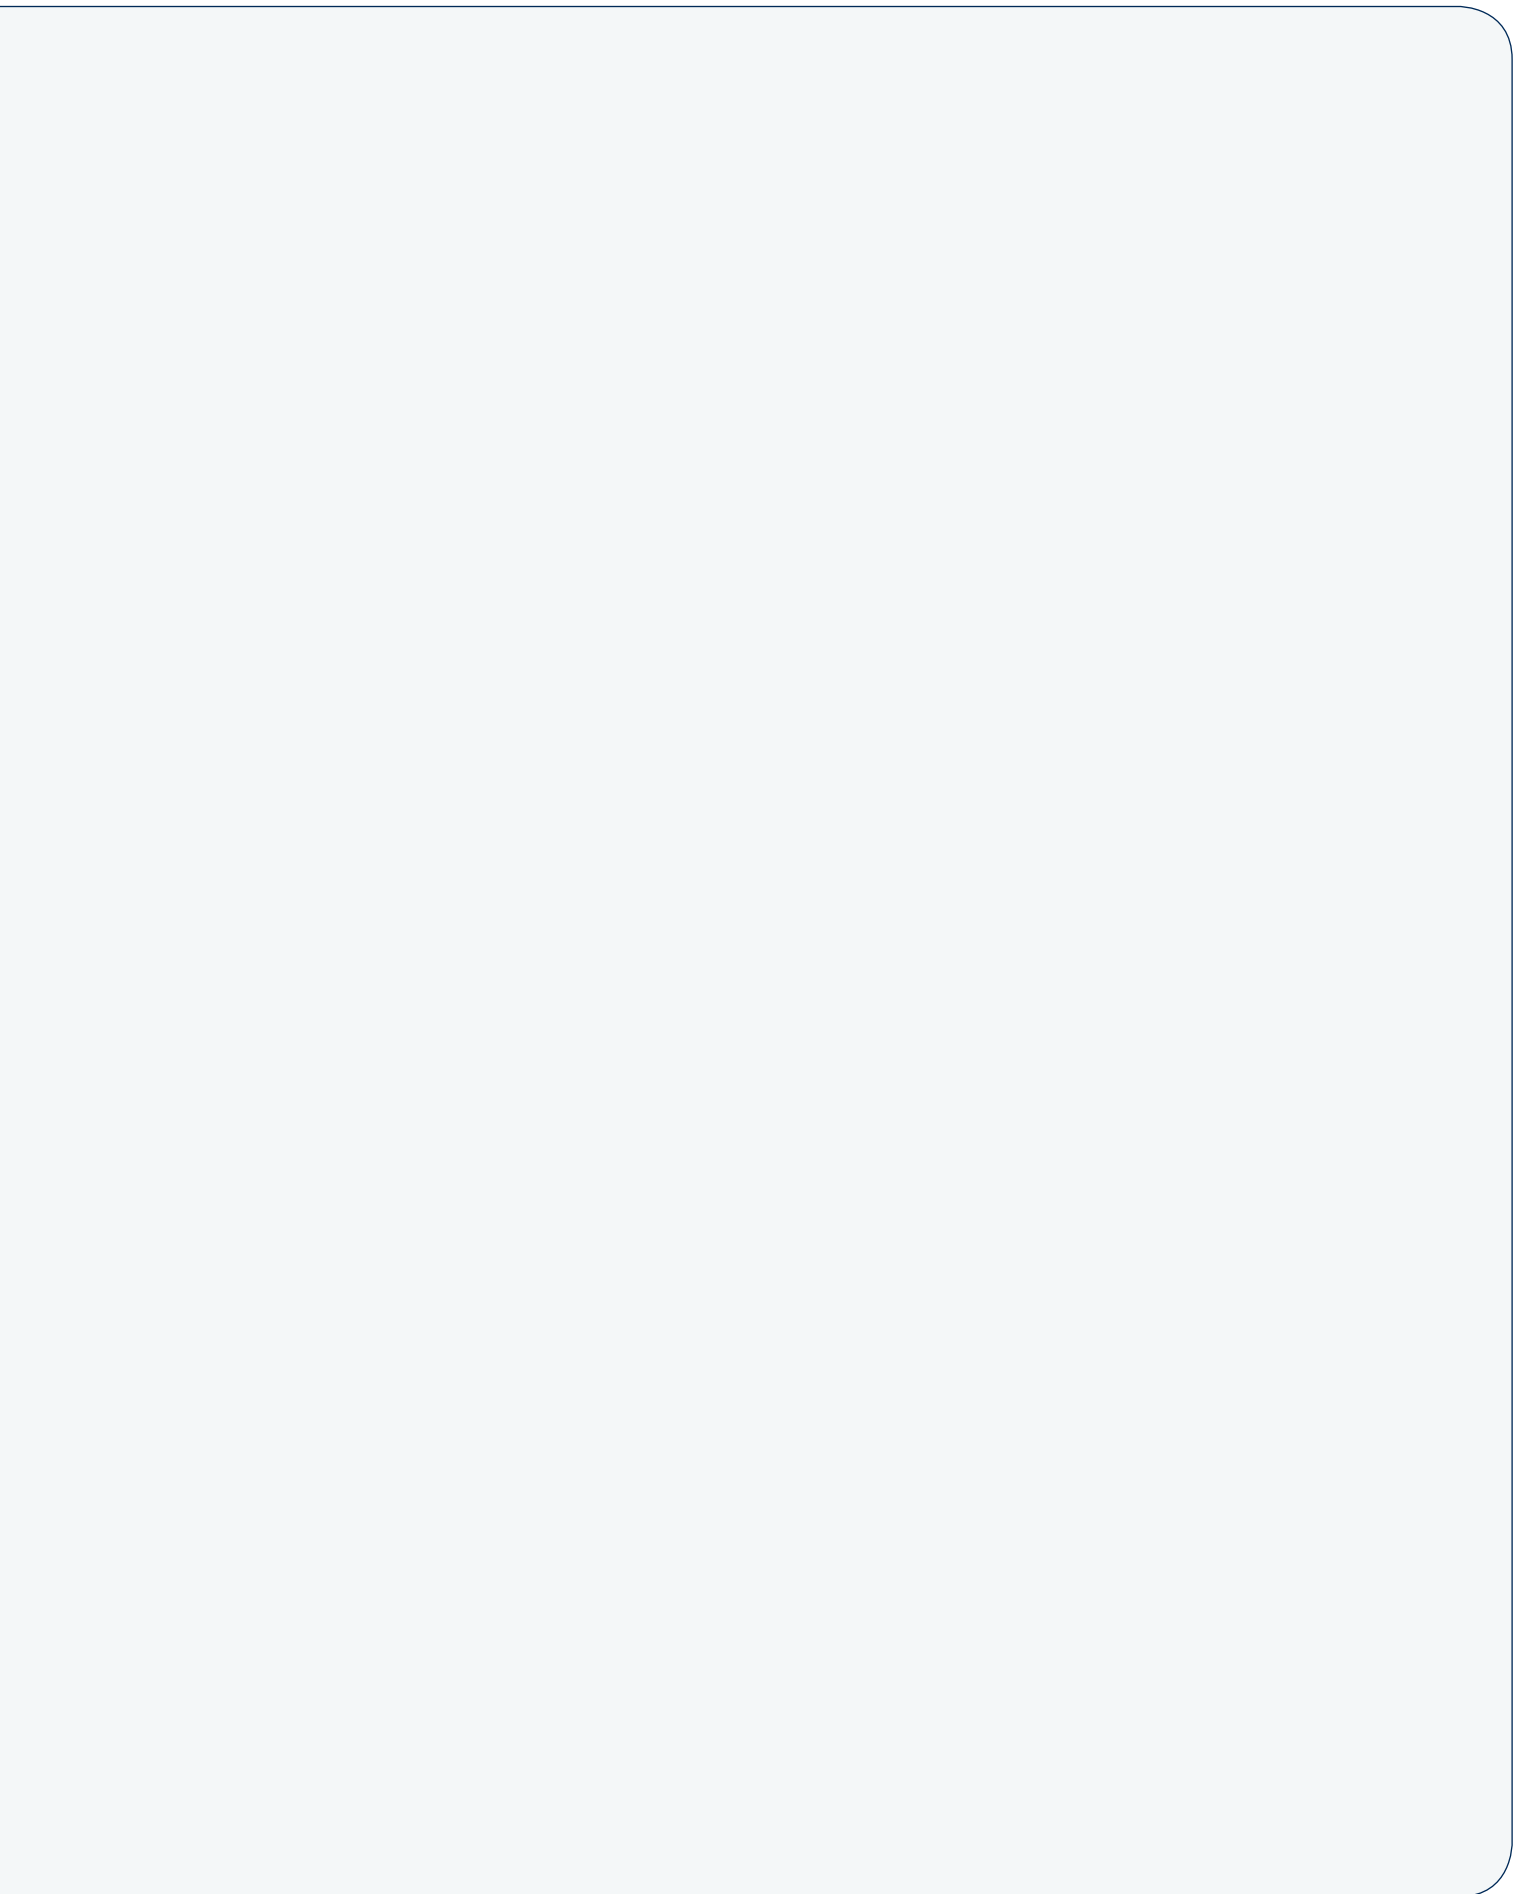

Vetter is as strong and successful as its employees. When people work together as members of a team, each of them is able to put their strengths and expertise to optimum use. Therefore we endeavor to support the continued career development of our employees. Continual training and unique development programs bring out potential in our employees and allow for innovative ideas to grow. For the market success of your product.
