

More than Filling.

Anti-counterfeiting for improved product safety: V-OVS®

Pharma solutions for tomorrow, today.

Product integrity from filling until use.

Anti-counterfeiting for improved product safety: V-OVS®

The V-OVS® tamper-evident closure is designed to give glass-barrel syringes integrated luer lock features.

**For syringes with
a format of:**
0.1 ml – 10 ml

This innovative solution offers the following benefits:

■ **Familiar handling:**

The syringe is prepared by simply removing the cap – which breaks the seals and allows the luer lock connection to be used.

■ **Wide-ranging compatibility:**

Many different rubber formulations are available, making it suitable for syringe formats with a luer cone and groove.

Furthermore, processing of the V-OVS® closure is possible on existing aseptic production equipment without the need for major modifications – the process flow remains unchanged. The system is compatible with autoinjector systems.

Tamper evidence at a glance.
