

Vetter Pharma–Fertigung – Over 50 Years experience in contract manufacturing

Vetter has been a strategic partner to the leading companies in the pharmaceutical and biotechnology sector for more than 25 years. As a full–service provider, Vetter’s operation spans three divisions – Vetter Development Service, Vetter Commercial Manufacturing and Vetter Solutions. As a result, Vetter can offer support throughout the entire life cycle of a product – from the clinical development of new medicinal products to a successful market launch. Clients benefit from our company’s international expertise in the production of aseptically pre–filled application systems, primarily in the field of highly sensitive agents such as for example monoclonal antibodies and interferons.

The company offers clients flexible access to state–of–the–art technology capable of implementing FDA–approved products and processes and the manufacture of FDA–approved products. Vetter’s competence in the development of processes and filling systems contributes to meet clients requirements in respect of products and procedures – thus reducing time–to–market. The company currently has three production facilities in the Ravensburg area which operate independently of one another and can therefore provide the back–up reserves necessary to ensure an exceedingly high level of delivery reliability and process security.

In order to maintain our high standards, Vetter has an annual investment budget running into tens of millions. These funds are invested in developing capacities and widening our service portfolio, as well as in process optimization.

Should you have any questions on our range of outsourcing services one of our company experts would be happy to assist you.
