

Vetter Device Assembly and Packaging

Customized solutions for every life cycle stage

Partner with us for a wide range of packaging solutions and injection device options that can help differentiate your product, address sustainability, and improve user experience.

Device assembly

We develop robust, efficient, and scalable processes that integrate seamlessly into your aseptic filling program. Our expertise includes:

Pens

Assembled around either a single or dual-chamber cartridge, pens provide patients with a user-friendly way to administer your injectable product.

Autoinjectors

Convenient, compact, and easy to handle, autoinjectors can be a useful way to facilitate long-term patient self-administration of products delivered from a syringe.

Safety devices

This assembly option simplifies needle stick protection by combining a single-chamber syringe and staked needle.

Packaging

We can package a wide variety of drug delivery systems and formats. Our services include:

- Cartoning (all paper)
- Blistering
- Labeling
- Serialization and aggregation
- Testing

Why choose Vetter?

Quality

Your product's purity and integrity are a top priority throughout the packaging process.

Complex packaging

We have decades of experience developing technically challenging delivery systems.

Flexibility

Our wide range of capabilities and services can be customized to specific product needs.
